

VXL BASS ATTACK

Pre-Amp/Direct Box

Shape and On/Off stompbox-style footswitches

A monster tone-shaping pre-amp that doubles as a full-featured direct box, Hartke's VXL Bass Attack Pre-Amp/Direct Box offers expanded control over the tone of any bass rig. Featuring the famous Hartke Shape circuit, extensive EQ controls and stunning tube emulation, this pedal provides endless possibilities for attaining a more powerful, full-range bass tone, from the grittiest of metal sounds to the warmest of rock tones and everything in between.

The Bass Attack pedal's circuitry features an abundance of controls that can be used to craft virtually any bass tone imaginable. It features the world famous Hartke Shape circuit, a preset EQ curve that will enable any bass player to further control their tone and get the sound that's just right for their playing style. In addition, the Bass Attack pedal's powerful 3-band EQ offers complete control over the Bass, Treble and Brite aspects of your tone, while its variable Harmonics control emulates the warmth of a tube pre-amp. Also, its Mix knob allows you to tweak how much of the pedal's processed tone is blended with the natural sound of your rig.

Beyond its tone shaping capabilities, the Bass Attack pedal functions as a direct box, giving bass players a clean, balanced direct output to send to the PA system. The pedal lets you tap the signal from your bass and pass it from the output to your front-of-house mixer. From there, the signal going into the PA can be tweaked without affecting the original sound simply by leaving the pedal's XLR direct output Pre/Post switch in the Pre (out) position. Alternatively, you can include the harmonic effects in the XLR direct output signal by leaving the switch in the Post (in) position.

Whether you're recording or playing live, Hartke's VXL Bass Attack Pre-Amp/Direct Box will give you the exact tone you've been searching for.

FEATURES

- Tone-shaping pre-amp/direct box
- Famous Hartke Shape circuit
- 3-band (Bass, Treble, Brite) controls
